## Business Background

BonelliErede is the market leader for legal and tax services in Italy, covering all areas of business and corporate criminal law. Thanks to its offices in Europe, Africa and the Middle East and to the partnerships with independent law firms around the world, BonelliErede is a true international player.

By combining the skills of its professionals, the firm also offers support through specialised working groups organised by sector and practice: the focus teams. The focus teams are organised by sector and practice area and pool their individual legal expertise and their in-depth sector knowledge to offer clients assistance with all aspects of their businesses.

*The simplicity of Ermes is astonishing, not a usual security tool. It was Easy to install, Easy to manage, in a matter of minutes all company users were both protected from web threats and at the same time could browse faster without annoying contents*

MAURO BALDONI, Chief Information Officer BonelliErede

## Challenge

BonelliErede has chosen to partner with Ermes with the aim to secure the web navigation of its employees in every working context. By making users invisible and unreachable, preventing any sensitive and personal information to be exposed on the internet and accessed by any malicious actor, the company wants to ensure a safe web navigation, fitting constantly-evolving trends and working environments

## Solution

Ermes met BonelliErede's need of securing web navigation of employees in every working environments against the contemporary web phishing attacks. With Ermes Intelligent Web Protection, BonelliErede has been able to activate the on-device web protection, fully compatible with the already existing cyber-ecosystem, that automatically and in real time updates the protection status.

## Results

- With the adoption of Ermes Intelligent Web Protection, BonelliErede has been able to reduce from 87% to ~ 0% the amount of employees digital identities exposed to the web, avoiding the risk of these being leakage and used for building targeted attacks.
- 61 Millions of unnecessary or potentially dangerous connections have been blocked, preventing employees to reach websites that could be malicious.
- In addition, significant improvements of the performance have been registered; 3 TB saved in bandwidth and 45% of workload reduction in each network apparatus allowed for a faster, more comfortable and frictionless navigation even working remotely.

## Ermes Intelligent Web Protection

Ermes is the first on-device web protection that avoid people-centered web attacks before they even occur. Any company can easily activate Ermes protection by providing users with a private, fast and safe navigation experience through both PC and mobile devices, nevertheless they are located. The simple and standing-alone solution, fully compatible with any cyber-ecosystem, allows companies to immediately activate web browsing protection in a matter of minutes.

## About us

**“We are on a mission to provide breakthrough Solutions and make the web a safer place.”**

Born as spin-off of Polytechnic of Turin, Ermes is an innovative cybersecurity company. We filter more than 100 million connections every day to let people worldwide enjoy a safe navigation experience and protect them against the most sophisticated forms of people-centered attacks.
